No load fee, no minimum usage fee, no early termination fee

**Multiple payment options
Low monthly rates and rates per kilowatt hour**

Free \$25 Credit

Details:

Payless Power's current product offering to Texas consumers is a low month-to-month prepaid electricity rate per kwh, with true-up to actual consumption. The customer's initial payment is estimated, based on Payless Power's current rate per kwh, characteristics of their premises (such as dwelling type, bedrooms, and square footage), their ERCOT Load Profile classification, and season of the year. Payless Power may also offer an initial discount to its normal charges under certain circumstances. Upon receipt of payment, the account will typically go customer "active" within 2 to 4 business days.

Once the customer's order is verified, ERCOT meter readings for the past twelve months. If the customer's usage is significantly higher than the initial estimate, Payless Power may require the customer to pay an additional amount in order to guarantee a full 30 days of service. This is known as a HUD (Historical Usage Data) adjustment.

Three or four days after activation, the customer's first mailed bill is sent via the US Postal Service covering the service period beginning 30 days from the date of activation. Monthly recurring bills will thereafter be mailed to the customer approximately once every 30 days. Customers have 16 days to pay their bills, after which they are subject to the disconnection process. The disconnection process consists of a 10 day warning letter and then disconnection of the service.

In addition to estimated current charges, billings may include true-ups from prior billing periods. Once actual consumption is known (after receiving meter readings from the TDSP), then the customer's estimated amounts paid will be "Trued-Up" with their actual usage; if the true-up shows that the customer's advance payment was more than what they

***Discount requires minimum payment and is subject to change**

~~actually used, then the customer will receive a credit on their next billing. If they used more than the original estimate, then the customer would be charged for the additional amount.~~

With Payless Power's New Flex pay discount plan starting new service is now easier than ever. The moment a customer sets up a new account they will receive \$25 in FREE ELECTRICITY! Then they would make a Flex Pay qualifying payment PAY \$150 or more >> 4 Cents Off (a savings of up to 26% off*) PAY \$75-149.99 >> 2 Cents Off (a savings of up to 13% off*) PAY less than \$75 >> Low base rate with the flexibility to pay what fits your budget. Upon receipt of payment, the customer's order is submitted to ERCOT; the account will typically go "active" within 3 to 5 business days for standard service and same day next day for priority service. Customer will then be texted and or e-mailed daily on their usage and balance. Along with the daily usage the customer would also get an estimation on the number of days that service would last. If the balance falls below 0 a disconnect order would be sent out. Once the minimum balance is met a reconnect order is sent out and the electricity is normally reconnected with in 2 hours. The customer at any time may take advantage of the 24 flex pay discount program and the discount last the length of the payment. For example if a customer were to start the service with a \$25 payment they would have the low Payless Power base rate. If later on they made a payment of \$75 then \$0.02 cents would be taken off their kilowatt hour rate until they used up \$75n at that point the kilowatt rate would return to the base rate until they made another payment of \$75 or more.
